

**Amendments to the Claims:**

A listing of the entire set of pending claims (including amendments to the claims, if any) is submitted herewith per 37 CFR 1.121. This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Currently amended) A method for recording a television program broadcast by a TV broadcaster and a web content communicated by a web server, said method comprising ~~the steps~~ of:

receiving a request to record said television program selected by a user;

establishing a web connection to a the web server of said TV broadcaster;

downloading the web content responsive to said television program; and[[,]]

synchronizing and for storing in a memory said television program ~~selected by said user~~ and said downloaded web content, said television program received via a first medium from the TV broadcaster and said downloaded web content received via a second medium from said web server ~~in a memory~~.

2. (Currently amended) The method of claim 1, further comprising ~~the step of~~ replaying said stored television program and the web content responsive to said television program in a synchronized manner.

3. (Currently amended) The method of claim 2, wherein said replaying ~~step~~ further comprises ~~the step of~~ retrieving said stored television program and the corresponding said downloaded web content from said memory.
4. (Currently amended) The method of claim 1, wherein said storing ~~step~~ further comprises a ~~step of~~ synchronizing said television program selected by said user with the web content of said web server responsive to said television program.
5. (Original) The method of claim 3, wherein said synchronization is achieved by time stamping said television program selected by said user and the web content that is responsive to said television program.
6. (Original) The method of claim 1, wherein said television program is received from the group consisting of cable, satellite, and antenna.
7. (Original) The method of claim 1, wherein said TV broadcaster includes a proxy or unaffiliated entity providing an interactive capability between said user and said web server of said TV broadcaster.
8. (Currently amended) A method for providing a synchronized replay of a television program and the corresponding web content originated from a TV broadcaster's web server, said method comprising ~~the steps of~~:
- transmitting a request to record said television program ~~via an input means~~;
  - automatically establishing a web connection to said web server of said TV broadcaster;

synchronizing and for storing in a memory said television program and the web content of said web server responsive to said television program ~~in a synchronized manner in a memory,~~  
said television program received via a first medium from said TV broadcaster and the web  
content received via a second medium from said web server;

receiving a request to replay said stored television program ~~via said input means;~~ and,  
replaying said stored television program and simultaneously displaying said stored web content that is responsive to said television program.

9. (Currently amended) The method of claim 8, wherein said replaying ~~step~~ further comprises ~~the step of~~ retrieving said stored television program and the corresponding said downloaded web content from said memory.

10. (Original) The method of claim 8, wherein said synchronization is achieved by time stamping said television program selected by said user and the web content that is responsive to said television program.

11. (Original) The method of claim 8, wherein said television program is received from the group consisting of cable, satellite, and antenna.

12. (Original) The method of claim 8, wherein said TV broadcaster includes a proxy or unaffiliated entity providing an interactive capability between said user and said web server of said TV broadcaster.

13. (Currently amended) An apparatus for providing a synchronized replay of a television program and ~~the~~ a corresponding web content, comprising:

a means for establishing a web connection to a web server displaying the corresponding web content;

a means for recording said television program selected by a user;

a means for synchronizing and for storing in a memory said television program ~~selected by said user~~ and the corresponding web content, said television program received via a first medium from a TV broadcaster and the web content received via a second medium from said web server;

a means for reproducing said stored television program and the corresponding web content ~~responsive to said television program~~ in a synchronized manner; and[[,]]

a control means configured to receive a request to record said television program ~~selected by said user~~, said control means controlling said recording means to initiate the recording of said television program and the corresponding web content ~~that is responsive to said television program~~.

14. (Original) The apparatus of claim 13, further comprising a means for displaying said stored television program and the corresponding web content.

15. (Canceled)

16. (Currently amended) The apparatus of claim 13, wherein said synchronization is achieved by time stamping said television program ~~selected by said user~~ and the corresponding web content ~~responsive to said television program~~.

17. (Original) The apparatus of claim 13, wherein said television program is received from the group consisting of cable, satellite, and antenna.
